Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6 and 13, drawn to an electro-optical device, classified in class 313, subclass 504.
- II. Claims 7-12, drawn to a method of manufacturing an electro-optical device, classified in class 445, subclass 23.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case for claim 7 one could move the concave parts over the power connection parts and down on them so that the power connection part is within the concave parts. Also one could form the concave parts on a sacrificial substrate with convexities by placing a material layer over the convexities and then place the material layer on a substrate and then dissolve or etch the sacrificial substrate away. For claim 11 one could lay the supporting layer and/or substrate on the power connection parts which are on a flat surface one could then rotate the configuration 180 degrees so that the power connection parts are now on at least one of the substrate and on a supporting layer provided on the substrate. Also one could put down the predetermined material layer before the power connection parts are placed on at least one of the substrate and on a supporting layer provided on the substrate and

the push the power connection parts into the layer before any curing would take place or cut into the predetermined material layer to make cavities for the power connection parts to be disposed.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to John S. Kern on 4/23/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
